Leon Black
Chairman and Chief Executive Officer
Apollo Global Management, LLC
9 West 57th Street, 43rd Floor
New York, NY 10019

Dear Mr. Black:

I write today regarding Apollo Global Management's (Apollo) investments in manufactured housing communities (MHCs), and to request information about how Apollo manages the MHCs it owns.

Manufactured homes, sometimes referred to as "mobile homes," are factory-built structures that are transported and anchored on a plot of land.¹ Individuals who purchase manufactured homes can place those homes on plots of land they already own, or they can place their homes on rented land. Nearly 3 million manufactured homes in the United States are located in "land-leased communities," or MHCs, in which MHC owners rent out the land where individuals place their manufactured homes.²

Manufactured homes provide a critical avenue to affordable home ownership for millions of Americans. Compared to "new or existing site-built housing," manufactured housing "is 35 to 47 percent cheaper per square foot."³ Manufactured home purchasers typically spend no more than \$200,000 on housing, and sometimes can find homes for less than \$10,000—a price "substantially lower than typical housing."⁴ These low prices make manufactured homes

attractive purchases for low-income and rural Americans.⁵ Around 22 million Americans live in manufactured homes.⁶

Twenty years ago, small, local, “mom and pop” businesses were the primary owners of MHCs.⁷ In recent decades, however, ownership patterns have shifted. Today, “there is a growing trend among some of the largest private equity firms and institutional investors to acquire assets in the manufactured housing sector.”⁸ The largest 50 MHC owners own a cumulative 680,000 home sites, which represents a “26% increase between 2016 and 2018.”⁹

Investment companies are attracted to MHCs, in large part, because MHCs are “stable source[s] of revenue, including during economic downturns.”¹⁰ This stability stems from residents’ lack of economic mobility. Manufactured homes can be difficult to resell, and the low-income homeowners who reside in manufactured homes often do not have access to more affordable housing options.¹¹ As a result, investment firms can expect a consistent revenue from the manufactured home owners renting land in MHCs.

MHC residents’ lack of economic mobility also makes them vulnerable to exploitation—and investment firms often engage in predatory management practices that boost profits at the expense of manufactured home owners. Investment firms exploit residents’ “limited mobility” by “dramatically increase[ing] rents to quickly increase profits.”¹² According to a recent report in the Des Moines Register, residents in two Iowa communities learned that their lot rents would increase 69% and 58% after a private firm purchased their MHC.¹³ Though investment firms claim to use rent increases to pay for maintenance and community improvements, residents report drastically different experiences. According to one California MHC resident, her community’s private equity owner

[C]laims that they’ve spent over \$100,000 on capital improvements in our community, and justifies rent increases because of that. But we don’t see what

improvements they've made... What we do see is that they've promised their investors a return of 7-8%. The same amount our rents went up.¹⁴

Unable to afford moving, and unable to sell their manufactured homes, some residents report that they are forced to choose between “paying for increase[ed] housing costs and other basic necessities, like food and medicine, or abandoning their homes.”¹⁵

According to publicly available information, Apollo is a large investor in the manufactured home community market and owns Inspire Communities, which includes over 13,000 manufactured home sites.¹⁶ To help me better understand the management practices that your company engages in, and the impact of those practices on the MHCs it owns, please provide answers to the following questions no later than June 18, 2019:

1. How many manufactured home communities does Apollo own? For each community, please provide the following information:
 - a. The number of mobile home sites;
 - b. The number of occupied mobile home sites;
 - c. The total number of community residents; and
 - d. The average and median income of the community residents.
2. According to recent reports, investment firms that purchase MHCs often drastically raise community rents as a means of making quick profits. For each MHC owned by Apollo, please provide the following information:
 - a. What was the average lot rent for residents in the last full calendar year the day before Apollo purchased the community?
 - b. What is the average lot rent for residents today?
 - c. How many times has Apollo raised rents in the community?
 - i. What was the rationale for those rent increases?
 - d. How many residents have been evicted since Apollo took over the community?

attractive purchases for low-income and rural Americans.⁵ Around 22 million Americans live in manufactured homes.⁶

Twenty years ago, small, local, “mom and pop” businesses were the primary owners of MHCs.⁷ In recent decades, however, ownership patterns have shifted. Today, “there is a growing trend among some of the largest private equity firms and institutional investors to acquire assets in the manufactured housing sector.”⁸ The largest 50 MHC owners own a cumulative 680,000 home sites, which represents a “26% increase between 2016 and 2018.”⁹

Investment companies are attracted to MHCs, in large part, because MHCs are “stable source[s] of revenue, including during economic downturns.”¹⁰ This stability stems from residents’ lack of economic mobility. Manufactured homes can be difficult to resell, and the low-income homeowners who reside in manufactured homes often do not have access to more affordable housing options.¹¹ As a result, investment firms can expect a consistent revenue from the manufactured home owners renting land in MHCs.

MHC residents’ lack of economic mobility also makes them vulnerable to exploitation—and investment firms often engage in predatory management practices that boost profits at the expense of manufactured home owners. Investment firms exploit residents’ “limited mobility” by “dramatically increase[ing] rents to quickly increase profits.”¹² According to a recent report in the Des Moines Register, residents in two Iowa communities learned that their lot rents would increase 69% and 58% after a private firm purchased their MHC.¹³ Though investment firms claim to use rent increases to pay for maintenance and community improvements, residents report drastically different experiences. According to one California MHC resident, her community’s private equity owner

[C]laims that they’ve spent over \$100,000 on capital improvements in our community, and justifies rent increases because of that. But we don’t see what

improvements they've made... What we do see is that they've promised their investors a return of 7-8%. The same amount our rents went up.¹⁴

Unable to afford moving, and unable to sell their manufactured homes, some residents report that they are forced to choose between “paying for increas[ed] housing costs and other basic necessities, like food and medicine, or abandoning their homes.”¹⁵

According to publicly available information, Federal Capital Partners is a large investor in the manufactured home community market and owns Horizon Land Company alongside an institutional investor, which includes over 9,000 manufactured home sites.¹⁶ To help me better understand the management practices that your company engages in, and the impact of those practices on the MHCs it owns, please provide answers to the following questions no later than June 18, 2019:

1. How many manufactured home communities does Federal Capital Partners own? For each community, please provide the following information:
 - a. The number of mobile home sites;
 - b. The number of occupied mobile home sites;
 - c. The total number of community residents; and
 - d. The average and median income of the community residents.
2. According to recent reports, investment firms that purchase MHCs often drastically raise community rents as a means of making quick profits. For each MHC owned by Federal Capital Partners, please provide the following information:
 - a. What was the average lot rent for residents in the last full calendar year the day before Federal Capital Partners purchased the community?
 - b. What is the average lot rent for residents today?
 - c. How many times has Federal Capital Partners raised rents in the community?
 - i. What was the rationale for those rent increases?

Robbie Pratt
Managing Partner
Havenpark Capital
51 W Center St., Suite 600
Orem, Utah 84057

Dear Mr. Antonelli and Mr. Pratt:

We write today regarding Havenpark Capital's investments in manufactured housing communities (MHCs), and to request information about how Havenpark Capital manages the MHCs it owns.

Manufactured homes, sometimes referred to as "mobile homes," are factory-built structures that are transported and anchored on a plot of land.¹ Individuals who purchase manufactured homes can place those homes on plots of land they already own, or they can place their homes on rented land. Nearly 3 million manufactured homes in the United States are located in "land-leased communities," or MHCs, in which MHC owners rent out the land where individuals place their manufactured homes.²

Manufactured homes provide a critical avenue to affordable home ownership for millions of Americans. Compared to "new or existing site-built housing," manufactured housing "is 35 to 47 percent cheaper per square foot."³ Manufactured home purchasers typically spend no more than \$200,000 on housing, and sometimes can find homes for less than \$10,000—a price

percent cheaper per square foot.”³ Manufactured home purchasers typically spend no more than \$200,000 on housing, and sometimes can find homes for less than \$10,000—a price “substantially lower than typical housing.”⁴ These low prices make manufactured homes attractive purchases for low-income and rural Americans.⁵ Around 22 million Americans live in manufactured homes.⁶

Twenty years ago, small, local, “mom and pop” businesses were the primary owners of MHCs.⁷ In recent decades, however, ownership patterns have shifted. Today, “there is a growing trend among some of the largest private equity firms and institutional investors to acquire assets in the manufactured housing sector.”⁸ The largest 50 MHC owners own a cumulative 680,000 home sites, which represents a “26% increase between 2016 and 2018.”⁹

Investment companies are attracted to MHCs, in large part, because MHCs are “stable source[s] of revenue, including during economic downturns.”¹⁰ This stability stems from residents’ lack of economic mobility. Manufactured homes can be difficult to resell, and the low-income homeowners who reside in manufactured homes often do not have access to more affordable housing options.¹¹ As a result, investment firms can expect a consistent revenue from the manufactured home owners renting land in MHCs.

MHC residents’ lack of economic mobility also makes them vulnerable to exploitation—and investment firms often engage in predatory management practices that boost profits at the expense of manufactured home owners. Investment firms exploit residents’ “limited mobility” by “dramatically increase[ing] rents to quickly increase profits.”¹² According to a recent report in the Des Moines Register, residents in two Iowa communities learned that their lot rents would

increase 69% and 58% after a private firm purchased their MHC.¹³ Though investment firms claim to use rent increases to pay for maintenance and community improvements, residents report drastically different experiences. According to one California MHC resident, her community's private equity owner

[C]laims that they've spent over \$100,000 on capital improvements in our community, and justifies rent increases because of that. But we don't see what improvements they've made... What we do see is that they've promised their investors a return of 7-8%. The same amount our rents went up.¹⁴

Unable to afford moving, and unable to sell their manufactured homes, some residents report that they are forced to choose between "paying for increase[ed] housing costs and other basic necessities, like food and medicine, or abandoning their homes."¹⁵

According to publicly available information, The Carlyle Group is a large investor in the manufactured home community market and owns 5,000 manufactured home sites.¹⁶ To help me better understand the management practices that your company engages in, and the impact of those practices on the MHCs it owns, please provide answers to the following questions no later than June 18, 2019:

1. How many manufactured home communities does The Carlyle Group own? For each community, please provide the following information:
 - a. The number of mobile home sites;
 - b. The number of occupied mobile home sites;
 - c. The total number of community residents; and
 - d. The average and median income of the community residents.
2. According to recent reports, investment firms that purchase MHCs often drastically raise community rents as a means of making quick profits. For each MHC owned by The Carlyle Group, please provide the following information:
 - a. What was the average lot rent for residents in the last full calendar year the day before The Carlyle Group purchased the community?

- b. What is the average lot rent for residents today?
 - c. How many times has The Carlyle Group raised rents in the community?
 - i. What was the rationale for those rent increases?
 - d. How many residents have been evicted since The Carlyle Group took over the community?
 - e. How many manufactured homes have been abandoned since The Carlyle Group took over the community?
3. What additional fees, if any, does The Carlyle Group charge residents at each of the MHC communities it owns?
- a. What is the sum total of rent collected by The Carlyle Group for each of the last five years (or, for the years since The Carlyle Group gained control of the MHC community, if the number is less than five)?
 - b. What is the sum total of all other fees collected by The Carlyle Group for each of the last five years (or, for the years since The Carlyle Group gained control of the MHC community, if the number is less than five). Please provide a summary of each of the largest types of fees collected.
4. What restrictions does The Carlyle Group place on the behavior and activities of residents living in its communities? For each MHC The Carlyle Group owns, please provide copies of the terms residents must agree to comply with as a condition for living in the community.
5. For each MHC owned by The Carlyle Group, please provide a list of profits reported to shareholders, investors, or limited partners for each year The Carlyle Group owned the community.

Sincerely,

Elizabeth Warren

David Bonderman
Chairman
TPG Capital
888 7th Avenue, 35th Floor
New York, NY 10106

Dear Mr. Bonderman:

I write today regarding TPG Capital's investments in manufactured housing communities (MHCs), and to request information about how TPG Capital manages the MHCs it owns.

Manufactured homes, sometimes referred to as "mobile homes," are factory-built structures that are transported and anchored on a plot of land.¹ Individuals who purchase manufactured homes can place those homes on plots of land they already own, or they can place their homes on rented land. Nearly 3 million manufactured homes in the United States are located in "land-leased communities," or MHCs, in which MHC owners rent out the land where individuals place their manufactured homes.²

Manufactured homes provide a critical avenue to affordable home ownership for millions of Americans. Compared to "new or existing site-built housing," manufactured housing "is 35 to 47 percent cheaper per square foot."³ Manufactured home purchasers typically spend no more than \$200,000 on housing, and sometimes can find homes for less than \$10,000—a price "substantially lower than typical housing."⁴ These low prices make manufactured homes

attractive purchases for low-income and rural Americans.⁵ Around 22 million Americans live in manufactured homes.⁶

Twenty years ago, small, local, “mom and pop” businesses were the primary owners of MHCs.⁷ In recent decades, however, ownership patterns have shifted. Today, “there is a growing trend among some of the largest private equity firms and institutional investors to acquire assets in the manufactured housing sector.”⁸ The largest 50 MHC owners own a cumulative 680,000 home sites, which represents a “26% increase between 2016 and 2018.”⁹

Investment companies are attracted to MHCs, in large part, because MHCs are “stable source[s] of revenue, including during economic downturns.”¹⁰ This stability stems from residents’ lack of economic mobility. Manufactured homes can be difficult to resell, and the low-income homeowners who reside in manufactured homes often do not have access to more affordable housing options.¹¹ As a result, investment firms can expect a consistent revenue from the manufactured home owners renting land in MHCs.

MHC residents’ lack of economic mobility also makes them vulnerable to exploitation—and investment firms often engage in predatory management practices that boost profits at the expense of manufactured home owners. Investment firms exploit residents’ “limited mobility” by “dramatically increase[ing] rents to quickly increase profits.”¹² According to a recent report in the Des Moines Register, residents in two Iowa communities learned that their lot rents would increase 69% and 58% after a private firm purchased their MHC.¹³ Though investment firms claim to use rent increases to pay for maintenance and community improvements, residents report drastically different experiences.
