

INEQUALITY INC. EXECUTIVE SUMMARY

How corporate power
divides our world
and the need for a new
era of public action

Since 2020, the richest five men in the world have doubled their fortunes. During the same period, almost five billion people globally have become poorer. Hardship and hunger are a daily reality for many people worldwide. At current rates, it will take 230 years to end poverty, but we could have our first trillionaire in 10 years.

A huge concentration of global corporate and monopoly power is exacerbating inequality economy-wide. Seven out of ten of the world's biggest corporates have either a billionaire CEO or a billionaire as their principal

shareholder. Through squeezing workers, dodging tax, privatizing the state and spurring climate breakdown, corporations are driving inequality and acting in the service of delivering ever-greater wealth to their rich owners. To end extreme inequality, governments must radically redistribute the power of billionaires and corporations back to ordinary people.

A more equal world is possible if governments effectively regulate and reimagine the private sector.

A decade of division

→ Jeff Bezos is one of the world's richest men. His fortune of US\$167.4bn has increased by US\$32.7bn since 2020.¹ Bezos flew to space for US\$5.5bn and thanked Amazon workers for making this possible.² Amazon has a history of making efforts to prevent unionizing by workers.³

→ Reverend Ryan Brown works at an Amazon fulfillment center in North Carolina. He describes the work as physically demanding, monotonous and grueling, with workers subject to racism and discrimination. He is involved in workplace organizing to address racism and secure a living wage.⁴

→ Seafood-processing workers in Southeast Asia have supplied food to supermarkets such as Amazon-owned Whole Foods and others.⁵ Workers in this industry include Susi, who used to work at a shrimp factory. She said, 'While we were working there wasn't time to rest. I was not allowed to drink.'⁶

The wealth of the world's five richest billionaires has more than doubled since the start of this decade, while 60% of humanity has grown poorer.⁷ For years, Oxfam has raised the alarm about widening and extreme inequality. As we enter 2024, the very real danger is that these extraordinary extremes are becoming the new normal. Corporate and monopoly power, as this paper shows, is an unrelenting inequality-generating machine.

The 2020s offer opportunities for leaders to take our world in a bold, new, fairer direction. This is yet to happen. An era of widening inequality has coincided with a narrowing of economic imagination. We are living through what appears to be the start of a decade of division: in just three years, we have experienced a global pandemic, war, a cost-of-living crisis and climate breakdown. Each crisis has widened the gulf – not so much between the rich and people living in poverty, but between an oligarchic few and the vast majority.

A brutal world for the many

For most people around the world, the start of this decade has been incredibly hard. At the time of writing, 4.8 billion people are poorer than they were in 2019.¹⁹ For the poorest people, who are more likely to be women, racialized peoples, and marginalized groups in every society, daily life has become more brutal still. Global inequality – the gap between Global North and the Global South – has grown for the first time in 25 years.²⁰

Prices are outpacing pay the world over,²¹ with hundreds of millions of people seeing their wages buy less each month and their prospects of a better future disappear. Climate breakdown, driven by the super-rich, is dramatically increasing global inequality.²² Protests and strikes by workers have repeatedly made the news headlines and filled the front pages.²³

Governments are finding it impossible to stay financially afloat in the face of mounting debt and the escalating costs of importing fuel, food and medicines. Low- and lower-middle-income countries are set to pay nearly half a billion US dollars a day in interest and debt payments between now and 2029, and they are having to make severe cuts to spending to be able to pay their creditors.²⁴ These cuts are often felt particularly acutely by women.²⁵

A wonderful world for the few

Meanwhile, the dramatic increase in extreme wealth witnessed since 2020 has become set in stone. Billionaires are now US\$3.3 trillion or 34% richer than they were at the beginning of this decade of crisis, with their wealth growing three times as fast as the rate of inflation.²⁶

This wealth is concentrated in the Global North. Only 21% of humanity lives in the countries of the Global North, but these countries are home to 69% of private wealth, and 74% of the world's billionaire wealth.²⁷ The other big winners in this period of crisis are global corporations. For huge corporations, just as for super-rich individuals, the last two decades have been extraordinarily lucrative and the last few years have been r tA (Ao /1)Tj ful wo7 i69%sthe fee than

used to benefit shareholders,²⁹ who are overwhelmingly among the richest people in every society.

The link between extreme wealth and corporate power

Sharply increasing billionaire wealth and rising corporate and monopoly power are deeply connected. The profits of mega-corporations are in turn used to benefit shareholders, at the expense of workers and ordinary people. This paper reveals how corporate and monopoly power has exploded inequality – and how corporate power exploits and magnifies inequalities of gender and race, as well as economic inequality.

The report uses new data to demonstrate that the richest people are not only the biggest beneficiaries of the global economy but exercise significant control over it too.

New research by Oxfam illuminates just how much of the world's financial assets are owned by the top 1%. Using data from Wealth X, we have found that the richest 1% own 43% of

all global financial assets.³⁰ In the Middle East, the richest 1% hold 48% of financial wealth; in Asia, the richest 1% own 50% of wealth; and in Europe, the richest 1% own 47% of wealth.

Looking at the 50 biggest public corporations in the world, billionaires are either the principal shareholder or the CEO of 34% of these corporates, with a total market capitalization of US\$13.3 trillion.^{31, 32} Seven out of the ten biggest publicly listed corporates in the world have a billionaire as CEO or as principal shareholder.³³ A principal shareholder's voting shares allow the shareholder to vote on who should be the Chief Executive Officer (CEO) and who should sit on the company's board of directors.

Billionaire owners use this control to ensure that corporate power is constantly growing through increasing market concentration and monopoly, enabled by government. This increased corporate power is in turn focused on providing ever-greater returns to them, the shareholders, at the expense of everyone else.

**THE WORLD'S FIVE RICHEST MEN
HAVE MORE THAN DOUBLED
THEIR WEALTH SINCE 2020,
WHILE FIVE BILLION PEOPLE
WERE MADE POORER.**

A new era of monopoly: the super charging of corporate power

We are living through an era of monopoly power that enables corporations to control markets, set the terms of exchange, and profit without fear of losing business. Far from being an abstract phenomenon, this impacts us in many ways: influencing the wages we are paid, the foods we eat and can afford, and the medicines we can access. Far from being accidental, this power has been handed to monopolies by our governments.

In sector after sector, increased market concentration can be seen everywhere. Globally, over two decades, 60 pharmaceutical companies merged into just 10 giant, global 'Big Pharma' firms between 1995–2015.³⁴ Two international companies now own more than 40% of the global seed market.³⁵ 'Big Tech' firms dominate markets:

consolidation within Africa.³⁸ India faces 'rising industrial concentration', especially by the top five firms.³⁹

Monopolies increase the power of corporations and their owners to the detriment of everyone else. Bodies such as the IMF agree that monopolistic power is growing and contributing to inequality.⁴⁰ Average markups for mega-corporations have ballooned in recent decades;⁴¹ while monopoly power enabled large firms in many concentrated sectors to implicitly coordinate to increase prices to drive up their margins since 2021,⁴² with energy, food and pharma sectors seeing huge price hikes.⁴³

Private equity firms, backed globally by US\$5.8 trillion of investors' cash since 2009, have used privileged financial access to act as a monopolizing force across sectors.^{44, 45} Beyond private equity, the 'Big Three' index fund managers – BlackRock, State Street and Vanguard – together manage some US\$20 trillion in people's assets, close to one-fifth of all assets under management,⁴⁶ which has deepened monopoly power.⁴⁷

Four ways that corporate power fuels inequality

Increasing monopolization has supercharged corporate power, which is directed at one primary goal above all others: increasing returns to shareholders. In order to maximize shareholder returns, corporations use this power to act in ways that drive and further entrench inequality. This report looks at four of the ways this is done:

1. Rewarding the wealthy, not the workers

Corporations drive inequality by using their power to force wages down and direct profits to the ultra-wealthy. In 2022, the International Labour Organization (ILO) warned that the historic decline in real wages could increase inequality and fuel social unrest.⁴⁸ Our own analysis for this report finds that 791 million workers have seen their wages fail to keep up with inflation and as a result have lost US\$1.5 trillion over the last two years, equivalent to nearly a month (25 days) of lost wages for each worker.⁴⁹ Women are vastly overrepresented in the poorest-paid and least

secure jobs,⁵⁰ and in 2019, earned just 51 cents for every US\$1 in labour income earned by men.⁵¹ Racialized peoples face exploitation in supply chains,⁵² and white people disproportionately benefit from the profits generated by corporations.⁵³

Further, corporations have used their influence to oppose labour laws and policies that could benefit workers, such as fighting minimum wage increases,⁵⁴ reforms that undermine workers' rights,⁵⁵ political restrictions on unionization,⁵⁶ and rollbacks to child labour laws.⁵⁷

2. Dodging taxes

Corporations and their wealthy owners also drive inequality by undertaking a sustained and highly effective war on taxation. The statutory corporate income tax rate has more than halved in OECD countries since 1980.⁵⁸ Aggressive tax planning, abuse of tax havens, and incentives result in tax rates that are much lower, and often closer to zero.⁵⁹

This drives inequality in a number of ways. Corporate taxes are disproportionately borne by the richest, thus the collapse in corporate taxes in recent decades has essentially provided another tax cut for the wealthy.⁶⁰ It has also deprived governments around the world, but especially in the Global South, of trillions of US dollars in revenue that could be used to reduce inequality and end poverty.⁶¹ Every tax dollar dodged is a nurse that will never be hired or a school that cannot be built.

3. Privatizing public services

Around the world, corporate power is relentlessly pushing into the public sector, commodifying and segregating

corporate returns rather than human rights.⁶⁴ Private equity firms are snapping up everything from water systems to healthcare providers and nursing homes, amid a litany of concerns about poor and even tragic outcomes.⁶⁵

Privatization can drive and reinforce inequalities in vital public services, entrenching gaps between rich and poor, excluding and impoverishing those who cannot pay while those who can pay are able to access good healthcare and education.⁶⁶ Privatization can also drive inequalities on the basis of gender,⁶⁷ race,⁶⁸ and caste. For example, Oxfam found that Dalits in India face high and unaffordable out-of-pocket fees in the private healthcare sector;⁶⁹ financial exclusion in the private education sector; and overt discrimination in both.⁷⁰

4. Driving climate breakdown

Corporate power is driving climate breakdown, in turn causing great suffering and exacerbating inequalities, including along lines of race, class and gender.⁷¹ Many of the world's billionaires own, control, shape and financially profit from processes that emit greenhouse gases,⁷² and benefit when corporations seek to block progress on a fast and just transition, deny and spin the truth about climate change, and crush those who oppose fossil fuel extraction.⁷³

It doesn't have to be this way: an economy for all is possible

Runaway corporate power and runaway extreme wealth have been contained and curbed in the past and can be again. This report outlines concrete, proven and practical ways to make the economy work for all of us.

Set goals and plans to radically reduce inequality fast

There is broad agreement that inequality is too high in almost every nation and globally.⁷⁶ In 2023, world-leading economists including Jayati Ghosh and Thomas Piketty⁷⁷ came together with former UN, IMF and World Bank staff

to call for clear targets to be set for inequality reduction. Oxfam supports the idea, proposed by Joseph Stiglitz,⁷⁸ that every nation should aim for a situation in which inequality is reduced to the point where the bottom 40% of the population have around the same income as the richest 10%, known as a Palma of 1.⁷⁹

The richest governments have a particular responsibility, given their disproportionate influence in setting global rules and norms. The role of the Brazilian-led G20 and the efforts of Global South nations at the UN offer vital opportunities for multilateral action to tackle national and global inequality.

Reining in corporate power: three practical steps

1. Revitalize the state

A strong and effective state is the best bulwark against corporate power. It is a provider of public goods; a maker and shaper of markets; a corrector of market failures; and an owner and operator of national commercial ventures, accounting for up to 40% of domestic output worldwide in 2018.⁸⁰ Governments need to take a proactive role in shaping their economies for the common good. They must:

- Empower workers and communities. Corporations must pay living wages and commit to ensuring climate and gender justice: dividend payments and buybacks should be banned until this is guaranteed. Trade unions must be supported, protected and encouraged. CEO pay should be capped. Governments must introduce legally binding rules to guarantee the rights of women and racialized peoples, and to ensure mandatory human rights and environmental due diligence.
- Radically increase taxes on corporates and rich individuals. This includes a permanent wealth tax and a permanent excess profit tax. The G20, under Brazilian leadership, should champion a new international agreement to increase taxes on the income and wealth of the world's richest individuals.

3. Reinvent business

Governments can use their power to reinvent and repurpose the private sector. They must:

- Use all their power to create and promote a new generation of companies that do not put shareholders first – including worker and local cooperatives, social enterprises, and fair-trade businesses – that are owned and governed in the interest of workers, local communities, and the environment. Competitive and profitable businesses don't have to be shackled by shareholder greed.
- Provide financial support to equitable businesses. They can also use tax and other economic instruments such as public procurement to prioritize equitable business models. No economic aid or government contracts should be given to companies that are missing their net zero targets, paying below living wages, or dodging taxes.
