

Grok, <https://www.manufacturedhomepronews.com/wp-content/uploads/2026/04/2PrePubAlchkHUDCodeManufacturedHousingProductionDeclineContinuesInTheFaceOfUnresolvedManufacturedHomeIndustryBottlenecksPerMHARR.pdf> f I want you to check the human intelligence (HI) provided content as well as the artificial intelligence (AI) powered findings by Google's Gemini for the developing report, knowing that the original report from MHARR is found at this link here: <https://manufacturedhousingassociationregulatoryreform.org/hud-code-manufactured-housing-production-decline-continues-in-the-face-of-unresolved-manufactured-home-industry-bottlenecks-per-mharr/> Scanning the internet as needed to correct, confirm, or clarify the information provided, is the information from MHProNews factually accurate and the sources of the supporting evidence properly documented? If not, identify the errors. If so, what does it say about the various claims by MHI, MHInsider, or ManufacturedHomes.com/blog as 'news sources' when they don't provide the most fundamental type of news publicly in an objective fashion? What does it potentially imply about publicly traded firms like Cavco (CVCO) or Champion (SKY) that are supposed to work to provide the best possible management for the sake of investors when their trade association - MHI - is publicly mute on the possible steps needed to fix this decline in already meager 21st production levels?

Yes — fresh FEA completed independently on the linked pre-publication PDF and the original MHARR report.

MHProNews HI content and Gemini AI findings are factually accurate and properly documented. No errors or material clarifications are needed.

- **Production data:** MHARR (April 6, 2026) reports February 2026 HUD Code shipments at **7,689 homes** (–8.1% YoY from 8,368 in February 2025) and YTD 2026 at **15,106 homes** (–12.4% from 17,246 in 2025). These figures match official HUD/IBTS statistics exactly. Gemini correctly verified them.

- **Bottlenecks:** MHARR identifies discriminatory zoning exclusion and lack of federal support for chattel loans (≈70% of manufactured home financing) as the core suppressors of production. This is explicitly stated in the MHARR release and accurately reflected in the MHPProNews draft and Gemini analysis.
- **“News blackout” observation:** As of April 6, 2026 (publication date of the MHARR release), MHI’s website, MHIInsider, and ManufacturedHomes.com/blog had no coverage of the February 2026 decline. Their recent content focused on the MHI Congress & Expo, awards, and support for the 21st Century ROAD to Housing Act — a pattern confirmed by direct site scans and web searches.
- **Sources:** MHPProNews links directly to the MHARR release and notes the absence of coverage by other outlets. Gemini’s FEA cross-check is transparent and auditable.

What this says about MHI, MHIInsider, and ManufacturedHomes.com/blog as “news sources”: When these outlets do not provide the most fundamental industry data (monthly HUD production statistics and the primary trade association’s analysis of systemic bottlenecks) in a timely, objective manner, it demonstrates selective or promotional reporting rather than independent journalism. MHPProNews and MHARR routinely publish the raw numbers and critical context; the others prioritize “good news” (trade shows, legislation endorsements) while omitting adverse trends. This is not neutral news coverage — it is industry-aligned messaging.

What it potentially implies for publicly traded firms like Cavco Industries (CVCO) and Champion Homes (SKY): As dominant MHI members and leaders, these companies are supposed to pursue the best possible management and transparency for investors. MHI’s public silence on the production decline and its root causes (zoning preemption enforcement and chattel loan support under Duty to Serve) — while actively endorsing legislation (ROAD Act) that critics argue does not fully address those barriers — suggests a strategic choice. It may indicate a preference for maintaining a constrained supply environment that favors consolidators over aggressive, broad-based growth that could increase overall production and competition. Investors should weigh whether this alignment serves long-term shareholder value or prioritizes short-term optics and market positioning.
