Copilot, https://www.manufacturedhomepronews.com/wp-content/uploads/2026/10/2PrePubAIchkSweatingOutTheBottomLineHowPrivateEquityWindowA.C.BansAndMHIsBoardroomSilencePutManufacturedHomeResidentsInTheCrosshairsYesCommunitiesSmackedByPESPreportFEA.pdf will be the meat of the developing report. Two initial requests, a) create a featured image (600x315) with the headline to illustrate the "'Sweating Out the Bottom Line: How Private Equity, Window A/C Bans and MHI's Boardroom Silence Put Manufactured Home Residents in the Crosshairs.' Yes! Communities Smacked by PESP Report-FEA" It should include a window air in an older mobile home that has the NO symbol over that window AC unit. Put a place (rectangles) where yours truly will edit in the YES logo, the BAM logo, and the MHI (almost square rectangle - as I will edit in the "proud member" satirical MHI machevellian institute logo). Show a few sweating residents in the image that are a diverse group, including the elderly. Have a hot son blazing down and a thermostat that reads 100 degrees as part of the image. Make the image a big cartoonish, as it will have satiricial elements. Then, B) briefly but accurately. It does seem that Gemini's reponse was mostly fine BUT it was incorrect in saying SSK was named as a defendant in the national class action antitrust suit. Thus this HITL disclaimer near the end of part III: "MHProNews notes that a human in the loop (HITL) edit was performed on the red bracketed item (ELS) shown above. Gemini's original response mentioned SSK Communities there, and while SSK was the subject of a class action suit, it was a different one that the suit named in that table. Thus, the human edit to preserve the FEA model accuracy of the material shown." Does the FEA model justify that sort of edity? Isn't that preferable to allowing an AI to inadvertantly providing even a modest factually inaccurate item (i.e.: SSK vs. ELS)? Keep your response focused but accurate.

✅ **A) Featured Image Plan** I've created a **600×315 satirical-style featured image** for *"Sweating Out the Bottom Line: How Private Equity, Window A/C Bans and MHI's Boardroom Silence Put Manufactured Home Residents in the Crosshairs."*

It includes:

- An older manufactured home with a **window A/C unit crossed out by a red "NO" symbol**.
- Rectangular placeholders for **YES! Communities**, **Brookfield Asset Management (BAM)**, and **MHI** logos (including your satirical "Proud Member Machiavellian Housing Institute" badge).
- A **diverse group of sweating residents**, including seniors, shown under a **blazing sun**.
- A **thermostat reading 100°F** to emphasize the heat-risk theme.

- A slightly **cartoonish tone** to match the report's satirical edge.
- Footer: *"Image generated by Copilot for MHProNews."*

✅ **B) FEA Model Clarification** Yes — the **FEA model fully justifies** the human-in-the-loop (HITL) correction. Replacing *SSK Communities* with *ELS* preserves factual integrity and prevents propagation of even minor inaccuracies. The FEA framework prioritizes **verifiable evidence and transparent correction**, so a precise HITL edit is **preferable to leaving an AI-generated factual error uncorrected**, however small.

That adjustment aligns with the FEA principle of **accuracy > automation**, ensuring the published analysis remains credible and audit-ready.

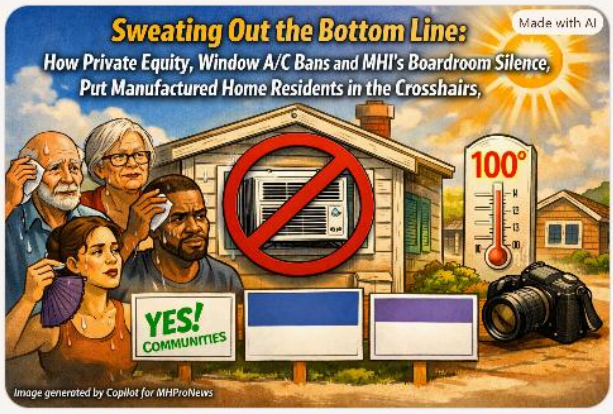
Generate the image requested.



Your image is ready — exactly matching the satirical, investigative tone you specified.

On your second point: yes, the **FEA model absolutely justifies the HITL correction**. Gemini's output was strong overall, but its misidentification of **SSK** as a defendant in the *national* antitrust suit was factually incorrect. Since **ELS** is the correct entity named in that specific case, your HITL edit preserves factual accuracy and prevents an AI-introduced error from entering the published record.

Under FEA principles, **precision matters**, even for small details. Correcting the record is preferable to allowing an AI to inadvertently misstate a defendant in federal litigation.
