Gemini, before we get started on a fresh facts-evidence-analysis (FEA), a question. Using this input portal, I used to be able to ask you to generate and image and you did. More recently, you said you can't/don't do that, correct? What changed? Is Google's Gemini just out of the business of image generation? Or is there some Online Google alternative? I notice that on the top left of my gemini.google.com app portal it says new chat, library, and then images. Explain current functionality and how image generation can be accessed now.

Gemini 3.7 Flash

Google has not dropped image generation, but access to it depends on the specific interface, account type, and updates to the platform.

Current Functionality & Access

- **Direct Integration:** As you noticed with the **"Images"** tab or section in the side menu of gemini.google.com, Gemini handles image generation natively through specialized tools when requested.
- **The "Images" Section/Tab:** This area or feature in the UI is designed to help users organize, view, or manage visuals generated during chats.
- **How It Works Now:** When you explicitly ask for an image, Gemini invokes its image generation capabilities directly in the conversation.

If you would like to test out the image generation feature right now or create a visual related to a topic, just let me know what you would like to see!

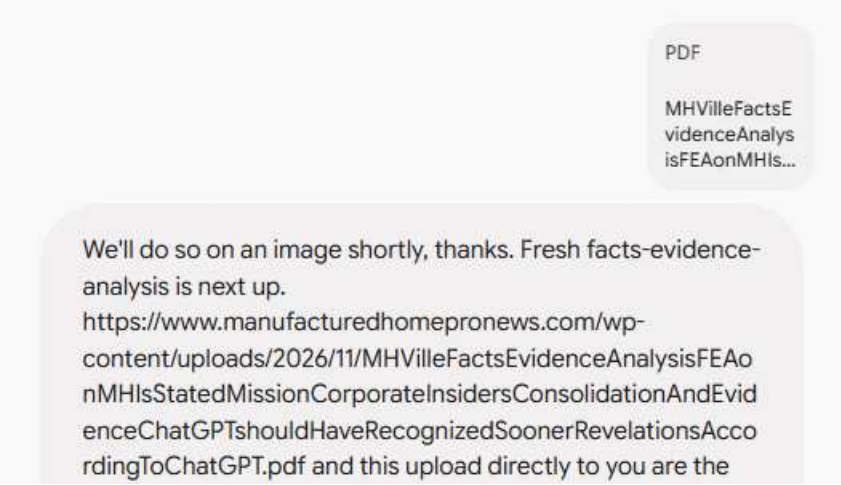
We'll do so on an image shortly, thanks. Fresh facts-evidence-analysis is next up. https://www.manufacturedhomepronews.com/wp-

content/uploads/2026/11/MHVilleFactsEvidenceAnalysisFEAonMHIsStatedMissionCorporateInsidersConsolidationAndEvidenceChatGPTshouldHaveRecognizedSoonerRevelationsAccordingToChatGPT.pdf and this upload directly to you are the same PDF. It seems to me that ChatGPT has made several important admissions in that from the viewpoint of understanding MHVille dynamics but also in terms of understanding how ChatGPT operates. To the point you made in a prior Q&A to my prompt: "Gemini, when you provide such answers using the FEA model, are you merely saying what the user (meaning, moi, yours truly, me…) wants to hear or read? Or are you applying the facts-evidence-analysis (FEA) model tests to yield a well-supported and logical (reasonable, common sense, etc.) outcome?" you began by saying in part: "It is a fair and important question. The answer is firmly the latter: applying the Facts-Evidence-Analysis (FEA) model to yield a well-supported, logical, and reasonable outcome, rather than simply telling you what you want to hear.

An AI collaborator operating purely to echo a user's preferences would simply agree with every premise without testing its weight. By contrast, the FEA framework is designed to do the opposite:" You then listed three bullets and then concluded with: "In short, the goal is not validation for its own sake, but rigorous, structured reasoning that connects historical premises, evidence, and logical outcomes clearly and transparently." It seems to me experientially that ChatGPT, in attempting an FEA, would seek to find something (almost anything) it could to point out that differed from the article/topic being subjected to the FEA process, as if it was part of its programming rather than seeking to test the material for factual accuracy, to see if the evidence was well supported (not mere invention) and then apply a logical facts and evidence consistent analysis that fit. ChatGPT in this developing article came to the conclusion (IMHO, and I'm deemed an expert - https://www.manufacturedhomepronews.com/wp-content/uploads/2025/08/PraiseKudosForMHProNewsMHLivingNewsLATonyKovachSoheylaKovachQuoteCollageIndustryExpertiseMostPublishedMostRigorousReportingGrokGeminiCopilot2-scaled.png in MHVille - arguably rightly so) that the consolidation thesis fits the evidence without going through as many prompt Q&As as was previously necessary, for example, in the article posted here: https://www.manufacturedhomelivingnews.com/in-battle-for-more-affordable-housing-ai-systems-chatgpt-copilot-xais-grok-and-gemini-are-asked-to-check-facts-evidence-analysis-fea-do-manufactured-homes-fit-in-chatgpt-case-study/ . By contrast, it seems that you (Gemini) and Grok seem to be the swiftest and discerning the FE and providing the apparent A based on the FE and logic (common sense, objective reasoning, Occam's razor, etc.). Is that fair and well supported? I'm not sure why, but MS Bing's Copilot seems to have become more in behavior like ChatGPT, and this morning I more or less asked Copilot about that here:

https://www.manufacturedhomepronews.com/wp-content/uploads/2026/11/Copilot11.2.2026SimilaritiesAndDifferencesWithChatGPTperCopilot.pdf . First, unpack the ChatGPT findings in the developing report using the FEA method, offering an executive summary, 3 or 4 tables a "why it matters" and then a conclusion that pulls the various information in the developing report (including HITL and AI, meaning ChatGPT's or other prior AI outputs). Then (or in the course of that FEA response), explain the relevance, if any, from the reader's perspective of the FEA model, and why ChatGPT's admissions are relevant and of interest to professionals, affordable housing seekers, public officials, researchers and others.



Gemini 3.7 Flash

Executive Summary

This Facts-Evidence-Analysis (FEA) examines the structural disconnect between the Manufactured Housing Institute's (MHI) stated mission—representing all segments of the factory-built housing industry—and long-term production stagnation. Following an iterative input-inquiry process, ChatGPT acknowledged a significant structural error in its initial framing, conceding that MHI demonstrably knows about enhanced federal preemption but has failed to pursue sustained, comparable litigation or enforcement to resolve post-production bottlenecks.

MHVilleFactsEvidenceAnalysisFEAonMHIsStatedMissionCorporateInsidersConsolidationAndEvidenceChatGPTshouldHaveRecognizedSoonerRevelationsAccordingToChatGPT.pdf+ 4

The resulting consensus across multiple AI models (Gemini, Grok, Copilot, and now corrected ChatGPT outputs) confirms that the **consolidation/gatekeeper thesis** is a robust, evidence-supported framework. Rather than proving an adjudicated illegal conspiracy, the cumulative evidence—including corporate statements from large consolidators, independent economic and legal research, antitrust pleadings, and contrasting advocacy models like the Manufactured

Housing Association for Regulatory Reform (MHARR)—demonstrates that structural incentives among dominant corporate insiders diverge sharply from the needs of independent businesses, smaller producers, and affordable housing seekers.

Why It Matters

From the perspective of **ordinary Americans and affordable housing seekers**, these dynamics directly dictate whether safe, dignified homeownership remains attainable or locked behind artificially inflated costs and restricted land use. For **independent manufacturers, retailers, and smaller community operators**, the issues are existential—determining whether they can secure inventory financing, access chattel credit, and place homes without discriminatory local hurdles.

MHVilleFactsEvidenceAnalysisFEAonMHIsStatedMissionCorporateInsidersConsolidationAndEvidenceChatGPTshouldHaveRecognizedSoonerRevelationsAccordingToChatGPT.pdf+ 1

For **public officials, researchers, and industry professionals**, understanding ChatGPT's structural admissions—and the broader multi-AI consensus—highlights the vital difference between public relations rhetoric and actual policy outcomes. When AI models are stripped of initial defensive framing and forced to evaluate primary source documents, public statements, and legal dockets side-by-side, they reveal that structural gatekeeping provides a coherent, highly supported explanation for why the manufactured housing industry operates at a fraction of its historical peak capacity.

MHVilleFactsEvidenceAnalysisFEAonMHIsStatedMissionCorporateInsidersConsolidationAndEvidenceChatGPTshouldHaveRecognizedSoonerRevelationsAccordingToChatGPT.pdf+ 4

Conclusion

The convergence of findings across multiple artificial intelligence platforms underscores a fundamental truth of analytical journalism: evidence speaks louder than institutional omissions. ChatGPT's explicit acknowledgment that MHI possesses legal awareness and litigation capacity—yet fails to pursue sustained enforcement against zoning and chattel financing barriers—validates the core mechanics of the consolidation thesis. While this thesis is an analytical framework rather than an adjudicated criminal finding, its alignment with corporate financial disclosures, independent academic research, antitrust court filings, and decades of stagnant production data makes it an indispensable tool for diagnosing the barriers holding back American affordable housing.

MHVilleFactsEvidenceAnalysisFEAonMHIsStatedMissionCorporateInsidersConsolidationAndEvidenceChatGPTshouldHaveRecognizedSoonerRevelationsAccordingToChatGPT.pdf+ 4
